

Elevator Fun: Basic Idea Visual

Purpose:

You know when you have a couple minutes in a day when you are waiting for someone or to take the bus and end up randomly scrolling on your phone. This website can be used in those instances to brighten someone's day with a joke, quote, or tip. Or to learn something new like a fact, trivia, or information about a country.

Why I think we should do this idea:

- learn how to implement apis
- Lots of freedom on how the design should look
- Quick activity only takes a couple minutes
- Useful & not super complex
- Most of time you would have like multiple apps that tell you each of these pieces of information —> this would provide a centralized place to learn & be cheered up
- Silly category for prizes
- Opportunity to make more complex —> add a game or other features (search bar, photo capture feature) if time permits
- Back-end: javascript, front-end: react
